HEALTH

P44 acts as a range of motion AND strengthening device. Its unique leg motion offers a variable range of motion and promotes specific strengthening of the quadracep– two things not easily attained with a conventional cycle. Improved quad strength helps with balance, while the stepping action improves circulation and offers a great cardiovascular workout.

USE

P44 can be integrated into existing fitness programs, such as circuit training and chair-based exercises, or be made available in a gym-type atmosphere. The unit is small, light, and extremely portable thanks to the integrated wheels and front handle. It can be left attached to any 4-legged chair or easily moved around a facility to accommodate space or user limitations.
